

## **Project Profile**

- 1. Project No:**
- 2. Project (Title): Establishment of Herbal Garden**
- 3. Principal investigator and other associates**
  - PI: Dr. G.R.S. Reddy**
  - Co PI: Nil**
  - Associates: Nil**
- 4. Project approval date by**
  - i) RAG: Nil
  - ii) RPC: Nil
  - iii) ICFRE: EAP sponsored by NMPB
- 5. Date of commencement of the project: April 2014**
- 6. Date of Completion of the project: March 2019**
- 7. Total Budget of the project: Rs 5.2 Lakhs**
  - i) List of equipment procured under the project (with cost): Nil
  - ii) Total expenditure on the project: Rs. 2.80 Lakhs only
- 8. Other institutional support in terms of equipment and infrastructure: Nil**

## **7. Conclusion**

The herbal garden project is a good step in forward direction especially the Institute of Forest Biodiversity is ideally located and many farmers and a number of visit for various purposes this place. Many Pharmacy students have come and experienced the plants some for the first time and our lectures have attracted them. So every year five to six pharmacy colleges and Unani medicine students are coming regularly to the Institute.

The direct benefits are that the visiting students from various schools and colleges will get to know and have firsthand knowledge of medicinal herbs in the area and the best germplasm in one place. The indirect benefits are the Institute will be conserving the selected medicinal herbs of economic and ethno-botanical importance and maintaining it for posterity.

- (1) The institute has developed two ha area under herbal garden.
- (2) It helped bring all the indigenous rare, endangered, threatened and other plants including medicinal plants into one place. They will be put with proper labels.
- (3) The outcome is school children visit the institute, farmers, industrialists and NGO's also visit at including tribal's who may be able to understand their potential and use and cultivate and explore market condition.

## **8. Abstract of significant findings**

The direct benefits are that the visiting students from various schools and colleges will get to know and have firsthand knowledge of medicinal herbs in the area and the best germplasm in one place. The indirect benefits are the Institute will be conserving the selected medicinal herbs of economic and ethno-botanical importance and maintaining it for posterity.

- (1) The institute has developed two ha area under herbal garden
- (2) It helped bring all the indigenous rare, endangered, threatened and other plants including medicinal plants into one place. They will be put with proper labels.

(3) The outcome is school children visit the institute, farmers, industrialists and NGO's also visit at including tribal's who may be able to understand their potential and use and cultivate and explore market condition

#### **9. Research Output**

It is not a research project and only a development project where the aim was to collect all medicinal plants in one place for extension education and demonstration purposes only.
